DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maynard et al. (U.S. patent # 3,955,122) in combination with Casey et al. (U.S. Patent # 6,407,901).

Maynard et al. disclose the claimed invention a heat sink (figure 1-10). However Maynard et al. does not disclose the utilization of the technique for a first switch module connected to heat sink, the first switch module having first and second switch device and a second switch module connected to heat sink, the second switch module having first and second switch device each switch device having gate terminal; a first power source input terminal connected to a cathode terminal of the second switching device of the first switching device of the second switch module; an output terminal connected to an anode terminal of the second switching device of the first switch module and a cathode terminal of the first switching device of the second switch module wherein the gate terminals of the switching device are controllable that the first switch module conduct during a first portion of the power duty cycle and the second switch module conducts during a second portion of the duty cycle. Casey et al. teaches the utilization of the similar technique for a first switch module (figure 2, item 40) connected to heat

Art Unit: 2838

sink, the first switch module having first and second switch device (figure 2, item 60) and a second switch module (figure 2, item 41) connected to heat sink, the second switch module having first and second switch device (figure 2, item 80) each switch device having gate terminal (figure 2, item 70 and 90); a first power source input terminal (figure 2, item 24) connected to a cathode terminal of the second switching device of the first switching device of the second switch module; an output terminal connected to an anode terminal of the second switching device of the first switch module and a cathode terminal of the first switching device of the second switch module wherein the gate terminals of the switching device are controllable that the first switch module conduct during a first portion of the power duty cycle and the second switch module conducts during a second portion of the duty cycle. It would have been obvious one having an ordinary skill in the art at the time the invention made to modify Maynard et al.'s heat sink by utilizing the technique taught by Casey et al. for the purpose of providing line protection circuit.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rajnikant B. Patel whose telephone number is 571-272-2082. The examiner can normally be reached on 6.30-5.00; m-f.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Sherry can be reached on 571-272-2084. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
